

Welcome. This is a short practice deck on making better coffee at home. The goal is simple habits you can repeat, not expensive equipment.

The main message: you do not need to buy anything new to improve. Repeat the same steps every time, and you can finally tell what is working.

Walk through each variable briefly. Each one is something you can adjust without spending money. Later slides show how to adjust them when a cup tastes off.

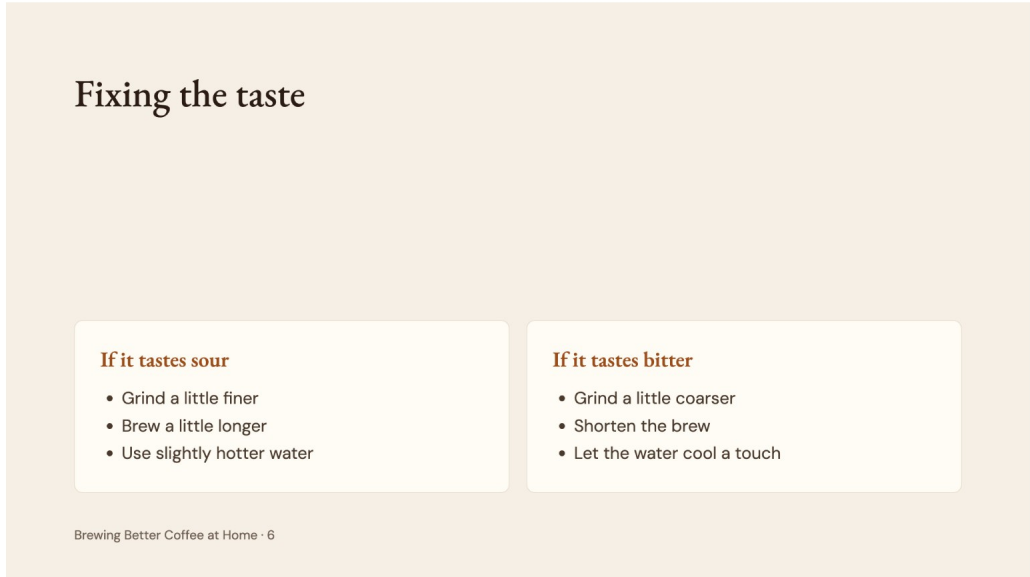

A ratio of about one part coffee to sixteen parts water is a widely used starting point. Treat it as a baseline, then adjust to your taste.

Three easy methods

Method	Taste	Best for
Pour-over	Clean and bright	Slow mornings, one cup at a time
French press	Full-bodied and rich	Easy brewing with little gear
AeroPress	Smooth and flexible	Travel and quick experiments

None of these is the best one. Pick the method that fits your routine, then focus on repeating it well.

Sour usually means the coffee is under-extracted; bitter usually means over-extracted. Change only one thing per cup so you can tell what made the difference.

Wrap up: try this over the weekend. Brew the same coffee twice, changing only the grind size, and compare the two cups.
